Calculate $\sqrt{b_1}$ test statistic (see 'Value' for formula)

Description

В1

Calculate $\sqrt{b_1}$ test statistic (see 'Value' for formula)

Usage

B1(X)

Arguments

Χ

the sample for which to calculate the statistic

Value

The value of the test statistic given by the formula: < to be added >

```
set.seed(1)
X <- rnorm(50)
B1(X)</pre>
```

BHI 3

BHI

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

BHI(X)

Arguments

Χ

the sample for which to calculate the statistic

Value

The value of the test statistic given by the formula:

$$\frac{1}{n\binom{n}{2}} \sum_{I_2} \sum_{i_3=1}^n \left(\frac{1}{2} I\{|X_{i_1}| < |X_{i_3}|\} + \frac{1}{2} I\{|X_{i_2}| < |X_{i_3}|\} - I\{|X_{(2),X_{i_1},X_{i_2}}| < |X_{i_3}|\} \right)$$

Examples

```
set.seed(1)
X <- rnorm(50)
BHI(X)</pre>
```

BHK

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

BHK(X)

Arguments

Χ

the sample for which to calculate the statistic

```
set.seed(1)
X <- rnorm(50)
BHK(X)</pre>
```

4 CM

CH

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

CH(X)

Arguments

Χ

the sample for which to calculate the statistic

Value

The value of the test statistic given by the formula: < to be added >

Examples

```
set.seed(1)
X <- rnorm(50)
CH(X)</pre>
```

CM

Calculate Cabilio-Masaro test statistic (see 'Value' for formula)

Description

Calculate Cabilio-Masaro test statistic (see 'Value' for formula)

Usage

CM(X)

Arguments

Χ

the sample for which to calculate the statistic

Value

The value of the test statistic given by the formula: <to be added>

```
set.seed(1)
X <- rnorm(50)
CM(X)</pre>
```

K2 5

K2

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

K2(X)

Arguments

Χ

the sample for which to calculate the statistic

Value

The value of the test statistic given by the formula:

$$\sup_{t>0} \frac{1}{n^2} \left| \sum_{i,j=1}^n I\{|X_i - X_j| < t\} - I\{|X_i + X_j| < t\} \right|$$

Examples

```
set.seed(1)
X <- rnorm(50)
K2(X)</pre>
```

K2U

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

K2U(X)

Arguments

Χ

the sample for which to calculate the statistic

6 KS

Value

The value of the test statistic given by the formula:

$$\sup_{t>0} \frac{1}{\binom{n}{2}} \left| \sum_{1 \le i < j \le n} I\{|X_i - X_j| < t\} - I\{|X_i + X_j| < t\}\right|$$

Examples

```
set.seed(1)
X <- rnorm(50)
K2U(X)</pre>
```

KS

Calculate Kolmogorov Smirnov test statistic (see 'Value' for formula)

Description

Calculate Kolmogorov Smirnov test statistic (see 'Value' for formula)

Usage

KS(X)

Arguments

Χ

the sample for which to calculate the statistic

Value

The value of the test statistic given by the formula:

$$\sup_{t} |F_n(t) - (1 - F_n(-t))|$$

```
set.seed(1)
X <- rnorm(50)
KS(X)</pre>
```

L2 7

L2

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

Arguments

X the sample for which to calculate the statistic

k the tuning parameter for the Laplace transform

Value

The value of the test statistic given by the formula:

$$\frac{1}{n^4} \sum_{i,j,k,l=1}^{n} \left(\frac{1}{k+|X_i-X_j|+|X_k-X_l|} - \frac{1}{k+|X_i-X_j|+|X_k+X_l|} - \frac{1}{k+|X_i+X_j|+|X_k-X_l|} + \frac{1}{k+|X_i+X_j|+|X_k+X_l|} \right)$$

Examples

```
set.seed(1)
X <- rnorm(50)
L2(X, 5)</pre>
```

М

Calculate Mira test statistic (see 'Value' for formula)

Description

Calculate Mira test statistic (see 'Value' for formula)

Usage

M(X)

Arguments

Χ

the sample for which to calculate the statistic

8 MI

Value

The value of the test statistic given by the formula: < to be added >

Examples

```
set.seed(1)
X <- rnorm(50)
M(X)</pre>
```

MGG

Calculate MGG test statistic (see 'Value' for formula)

Description

Calculate MGG test statistic (see 'Value' for formula)

Usage

MGG(X)

Arguments

Χ

the sample for which to calculate the statistic

Value

The value of the test statistic given by the formula: <to be added>

Examples

```
set.seed(1)
X <- rnorm(50)
MGG(X)</pre>
```

ΜI

Calculate _ test statistic (see 'Value' for formula)

Description

```
Calculate _ test statistic (see 'Value' for formula)
```

Usage

```
MI(X, k)
```

MK 9

Arguments

X the sample for which to calculate the statistic

k the value of parameter 'k' used in the formula

Value

The value of the test statistic given by the formula:

$$\frac{1}{n\binom{n}{2k+1}} \sum_{\mathcal{I}_{2k}} \sum_{i_{2k+1}=1}^{n} I\{-(X_{(k+1),X_{i_1},\dots,X_{i_{2k}}}| < X_{i_{2k+1}}\} - I\{X_{(k+1),X_{i_1},\dots,X_{i_{2k}}} < X_{i_{2k+1}}\}$$

Examples

```
set.seed(1)
X <- rnorm(50)
MI(X, 2)</pre>
```

MK

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

Arguments

X the sample for which to calculate the statistic

k the value of parameter 'k' used in the formula

Value

The value of the test statistic given by the formula:

$$\sup_{t>0} \left| \frac{1}{\binom{n}{2k}} \sum_{\mathcal{I}_{2k}} I\{-(X_{(k+1),X_{i_1},...,X_{i_{2k}}}) < t\} - I\{X_{(k+1),X_{i_1},...,X_{i_{2k}}} < t\} \right|$$

```
set.seed(1)
X <- rnorm(50)
MK(X, 2)</pre>
```

10 MOK

MOI

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

```
MOI(X, k)
```

Arguments

X the sample for which to calculate the statistic

k the value of parameter 'k' used in the formula

Value

The value of the test statistic given by the formula:

$$\frac{1}{n\binom{n}{2k}} \sum_{\mathcal{I}_{2k}} \sum_{i_{2k+1}=1}^{n} I\{|X_{(k),X_{i_1},\dots,X_{i_{2k}}}| < |X_{i_{2k+1}}|\} - I\{|X_{(k+1),X_{i_1},\dots,X_{i_{2k}}}| < |X_{i_{2k+1}}|\}$$

Examples

```
set.seed(1)
X <- rnorm(50)
MOI(X, 2)</pre>
```

MOK

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

Arguments

X the sample for which to calculate the statistic k the value of parameter 'k' used in the formula

NAI 11

Value

The value of the test statistic given by the formula:

$$\sup_{t>0} \left| \frac{1}{\binom{n}{2k}} \sum_{\mathcal{I}_{2k}} I\{|X_{(k),X_{i_1},\dots,X_{i_{2k}}}| < t\} - I\{|X_{(k+1),X_{i_1},\dots,X_{i_{2k}}}| < t\} \right|$$

Examples

```
set.seed(1)
X <- rnorm(50)
MOK(X, 2)</pre>
```

NAI

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

NAI(X, k)

Arguments

X the sample for which to calculate the statistic

k the value of parameter 'k' used in the formula

Value

The value of the test statistic given by the formula:

$$\frac{1}{n\binom{n}{k}} \sum_{\mathcal{I}_k} \sum_{i_{k+1}=1}^n I\{|X_{(1),X_{i_1},\dots,X_{i_k}}| < |X_{i_{k+1}}|\} - I\{|X_{(k),X_{i_1},\dots,X_{i_k}}| < |X_{i_{k+1}}|\}$$

```
set.seed(1)
X <- rnorm(50)
NAI(X, 2)</pre>
```

parTvalues

NAK

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

```
NAK(X, k)
```

Arguments

X the sample for which to calculate the statistic

k the value of parameter 'k' used in the formula

Value

The value of the test statistic given by the formula:

$$\sup_{t>0} \left| \frac{1}{\binom{n}{k}} \sum_{\mathcal{I}_k} I\{|X_{(1),X_{i_1},...,X_{i_k}}| < t\} - I\{|X_{(k),X_{i_1},...,X_{i_k}}| < t\} \right|$$

Examples

```
set.seed(1)
X <- rnorm(50)
NAK(X, 2)</pre>
```

parTvalues

Simulate the distribution of a test statistic in parallel

Description

This is just a parallel version of the Tvalues function, all arguments apply for this function. See Tvalues.

Usage

```
parTvalues(N, n, dist = list(), TS = list(), freecores = 0,
  clust = NULL)
```

rmixnorm 13

Arguments

N	the number of simulations to do
n	the sample size for each simulation
dist	a list which specifies the null distribution (see details)
TS	a list which specifies the test statistic to use (see details)
freecores	how many cores to leave unused (0 for maximum use of cpu)
clust	a cluster to use for parallel

Value

A vector of size N, each element being the value of the statistic TS on simulated samples of size n.

Examples

```
parTvalues(1000, 50, list(name='norm'), list(name='I1', k=2))
parTvalues(1000, 50, list(name='unif', min=-1, max=1), list(name='I2'))
parTvalues(1000, 50, list(name='logis', loc=0.5), list(name='K1', k=2))
parTvalues(1000, 50, list(name='exp'), list(name='K2'))
```

rmixnorm

Mixture of 2 normal distributions

Description

Generates random numbers from a mixture of 2 normal distributions

Usage

```
rmixnorm(n, mean1 = 0, sd1 = 1, mean2 = 0, sd2 = 1, p = 0.5)
```

Arguments

n	number of observations
mean1	mean of the first normal
sd1	standard deviation of the first normal
mean2	mean of the second normal
sd2	standard deviation of the second normal
р	probability of the first normal

Value

Vector of random numbers from the specified mixture of normals.

14 S1

rsl

Azzalini skew logistic distribution

Description

Generates random numbers from the skew logistic distribution

Usage

```
rsl(n = 1, xi = 0, omega = 1, alpha = 0, dp = NULL)
```

Arguments

n sample size.

xi vector of location parameters.

omega vector of (positive) scale parameters.

alpha vector of slant parameters.

dp a vector of length 3 whose elements represent the parameters described above.

If dp is specified, the individual parameters cannot be set.

Value

Vector of random numbers from Azzalini skew logistic distribution.

S1

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

S1(X, k)

Arguments

X the sample for which to calculate the statistick the tuning parameter for the Laplace transform

Value

The value of the test statistic given by the formula: <to be added>

S2 15

Examples

```
set.seed(1)
X <- rnorm(50)
S1(X, 5)</pre>
```

S2

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

```
S2(X, k)
```

Arguments

X the sample for which to calculate the statistick the tuning parameter for the Laplace transform

Value

The value of the test statistic given by the formula: <to be added>

Examples

```
set.seed(1)
X <- rnorm(50)
S2(X, 5)</pre>
```

SGN

Calculate Signed test statistic (see 'Value' for formula)

Description

Calculate Signed test statistic (see 'Value' for formula)

Usage

SGN(X)

Arguments

Χ

the sample for which to calculate the statistic

16 T1

Value

The value of the test statistic given by the formula:

$$\frac{1}{n}\sum_{i=1}^{n}I\{X_{i}>0\}-\frac{1}{2}$$

Examples

```
set.seed(1)
X <- rnorm(50)
SGN(X)</pre>
```

symmetry

symmetry: A package which implements tests for symmetry

Description

symmetry: A package which implements tests for symmetry

T1

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

Arguments

X the sample for which to calculate the statistick the tuning parameter for the Laplace transform

Value

The value of the test statistic given by the formula: <to be added>

```
set.seed(1)
X <- rnorm(50)
T1(X, 5)</pre>
```

T2 17

T2

Calculate _ test statistic (see 'Value' for formula)

Description

Calculate _ test statistic (see 'Value' for formula)

Usage

```
T2(X, k)
```

Arguments

X the sample for which to calculate the statistick the tuning parameter for the Laplace transform

Value

The value of the test statistic given by the formula: <to be added>

Examples

```
set.seed(1)
X <- rnorm(50)
T2(X, 5)</pre>
```

test_power

Calculate the power of a test

Description

This function calculates the power of a test given the null and alternative T values and the significance level.

Usage

```
test_power(t0, t1, alpha = 0.05, two_sided = FALSE)
```

Arguments

t0	the vector of null T values

the vector of alternative T values

alpha the significance level

two_sided indicator whether to use two sided critical region

Tvalues Tvalues

_	
T., a	1100
IVAI	Hes

Simulate the distribution of a test statistic

Description

Simulates the distribution of the specified test statistic under the given null distribution.

Usage

```
Tvalues(N, n, dist = list(), TS = list())
```

Arguments

N	the number of simulations to do
n	the sample size for each simulation
dist	a list which specifies the null distribution (see details)
TS	a list which specifies the test statistic to use (see details)

Details

The dist argument is a list which must contain a field called "name" which determines which distribution to use (e.g. "norm", "unif", "exp", etc.) and, if needed, the parameters for the distribution. The name must be such that the function "r"+name exists ("rnorm", "runif", "rexp", etc). Further parameters are passed to that function.

The TS argument is a list which must contain a field called "name" which specifies which test statistic function to use for each sample. The name can be "I1", "K1", "I2", "K2" for statistics implemented by us, or any other statistic for which an R function exists (e.g. "mean", "var", etc.).

Value

A vector of size N, each element being the value of the statistic TS on simulated samples of size n.

```
Tvalues(1000, 50, list(name='norm'), list(name='I1', k=2))
Tvalues(1000, 50, list(name='unif', min=-1, max=1), list(name='I2'))
Tvalues(1000, 50, list(name='logis', loc=0.5, sca=1), list(name='K1', k=2))
Tvalues(1000, 50, list(name='exp'), list(name='K2'))
```

WCX 19

WCX

Calculate Wilcoxon test statistic (see 'Value' for formula)

Description

Calculate Wilcoxon test statistic (see 'Value' for formula)

Usage

WCX(X)

Arguments

Χ

the sample for which to calculate the statistic

Value

The value of the test statistic given by the formula:

$$\frac{1}{\binom{n}{2}} \sum_{1 \le i < j \le n} I\{X_i + X_j > 0\} - \frac{1}{2}$$

```
set.seed(1)
X <- rnorm(50)
WCX(X)</pre>
